

Mailscreen 3001

Letterbomb Desktop Mail Scanner

The Control Screening MailScreen™ Model 3001 letterbomb detector detects ferrous and non-ferrous metallic objects contained within envelopes or thin packages. Objects are screened from both sides as they are passed under the "scanning bar" which is mounted across the top portion of the unit.

When the letterbomb detector detects metal, it will activate an audio alarm and a visual alarm. The unit's green light indicates that the unit is receiving power. This light tells the operator that the unit is ready to screen an envelope or small package. The red alarm light will signal by flashing when the unit detects an amount of metal within the "scanning zone" greater than the operators specifications as selected by the sensitivity dial position. The Model 3001 offers the highest reliability, durability, and operational effectiveness.

The Model 3001 is ideal for use in the following areas:

Mailrooms • Courier Services • Corporate Headquarters • Courthouses • VIP rooms • Correctional facilities

• **SYSTEM FEATURES/BENEFITS:**

- Small-size, lightweight and versatile
- Detects metallic objects from a large item to a staple – enhanced security .
