

MAILSCREEN® Model 3005

HIGH DISCRIMINATION DESKTOP MAIL SCANNER

Physical Dimensions:

Height: 15.25" (38.74 cm)
Width: 19.5" (49.5 cm)
Depth: 19" (48.3 cm)
Weight: 38 lbs (17.3 kg)

Temperature Range:

10° C - 50° C

Control Panel:

Power on/off, audible volume on/off (sound alert), audible and visual alarms & light indicators.
Complies with applicable international standards on electrical safety, EMC and CE.

Electrical:

110 or 220 Volts. Includes 9-volt alkaline battery back-up power. Optional rechargeable 9-V NiCad

FAST, SAFE, EFFECTIVE MAILSCREENING

Unfortunately, mailbombs are a hazardous safety concern for both private individuals and organizations. Lethal mailbombs are often concealed in a seemingly routine small package or letter. The **Mailscreen™ Model 3005** can identify parcels and packets of mail that should NOT be opened without further inspection.

The **Mailscreen™ Model 3005** enables the operator to detect metallic letter or parcel bomb components such as detonators, timing devices, shielding and batteries, that may be contained within an envelope or small package measuring up to 15.6 inches in width and a full 2.75 inches (7cm) in thickness. Objects are screened from both sides as they are passed through the scanning zone (15.6" x 2.75" opening, 39.6cm x 7cm with unlimited length).

The Control Screening **Mailscreen™** automatically detects ferrous and non ferrous metallic objects contained within envelopes or thin packages. The

Mailscreen™ purposely ignores smaller components, such as normal, routine stationary items, including paper clips, tags, pins and staples.

The detector will automatically activate an audio alarm and a visual alarm when it senses a preset level of metal. A factory provided test card is available to verify performance. The **Mailscreen™ 3005** is factory preset. No other setup is required.

The **Mailscreen™** is extremely affordable and portable, and in lieu of an x-ray system, should be a part of every office mail processing procedure. Control Screening, a former division of Philips Electronics, also makes and services the broadest range of mail x-ray scanners and weapons detectors.

SYSTEM FEATURES/BENEFITS

- Small, lightweight and versatile
- Detects metallic objects, using independent circuit coils, from a large item to a small razor blade or watch battery.
- Easy, automatic operation with no setup required.
- A.C. and battery backup standard.
- Harmless to film, tapes, compact and floppy disks.
- 100% digital reliability with immunity to external interference.
- Detects UK Forensic Standard metal disc.
- 12 month warranty parts & labor.
- Available Sensitivity Adjustment Switch for supervisor control.
